

SANITARY LANDFILL (with arrows) Sign (M30-12) in Rural Areas

Guidance:

The signing for rural sanitary landfills should be limited to directing drivers from high-type rural roads surrounding the landfill onto lower-type roads to the landfill. SANITARY LANDFILL (with arrow) signs should be erected on roads near the landfill to direct the drivers. “LANDFILL” paddle signs should be used as necessary to guide drivers along any subsequent secondary roads to the landfill. Usually only one intersection per primary or Series 1000 secondary road should be signed; however, two intersections might require signing if one intersection would not conveniently serve traffic from both directions. Primary routes or series 1000 secondary roads should not be signed unless there is a direct link to the landfill.

Option:

The entrance to the landfill may be signed with the SANITARY LANDFILL signs.

Support:

It is very important that the Division Engineer be notified far enough in advance of any landfill closing so that the removal or relocation of the M30-12 signs can be coordinated.
